DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10 February 2010 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 5-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Turner (6,406,396).

With reference to fig. 4, Turner discloses a plate (330) for a plate-link chain for use in a CVT comprising: spaces longitudinal and vertical legs, and an opening for receiving pairs of rocker members (315). The formulas claimed are understood to

describe the bending moment of all plates of similar design. The examiner notes that the claim language "selectively varying plate geometry variables until a minimum longitudinal leg bending moment is achieved..." recites a method/process step of optimizing the plates of the plate-link chain though the claims are drawn to the apparatus; therefore the method/process step using the formulas have not been given patentable weight.

Allowable Subject Matter

Claims 2, 3, 9, and 10 are allowed.

Response to Arguments

Applicant's arguments filed 04 June 2009 have been fully considered but they are not persuasive.

In response to applicant's arguments concerning the apparatus claims 5-8, the examiner points out that the claim language "selectively varying plate geometry variables until a minimum longitudinal leg bending moment is achieved..." recites a method/process step of optimizing the plates of the plate-link chain though the claims are drawn to the apparatus; therefore the method/process step using the formulas have not been given patentable weight. Additionally, the examiner points out that applicant's arguments are specific to the method of optimizing the plate geometry, and not the actual structure. In apparatus claims, patentable weight is given to the end structure claimed, not the method of determining that structure.
